DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-36, drawn to a system, method and computer apparatus for teaching phonics, classified in class 434, subclass 167.
- II. Claims 37-67, drawn to a game system, device and method for assisting a player in combining alphabetic characters in a word game, classified in class 463, subclass 11.
- III. Claims 68-78, drawn to a computer methodology and system for storage, retrieval and comparison of entries in a word dictionary, classified in class 704, subclass 10.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I, Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group I has separate utility such as a means for identifying and teaching words to a user through the use of phonemes identified by written characters on physical blocks that present identifiable alphabetic constructs to a student. A computer processor is used in this invention to present words to a user.

Invention Group II is an apparatus and method in which a player inserts blocks into a device to generate an audible signal when a word is properly completed. The apparatus of this

Art Unit: 3714

invention may be used to play sequence completion scenarios without necessarily using the apparatus to fulfill an educational purpose.

Invention Group III is a method and computer storage medium for matching alphabetic sequences as words when retrieved from a data-storage medium, and an audible signal is generated when the sequence retrieved matches a sequence of lettered objects arranged by a player. In this case, the storage retrieval and matching are accomplished through input of lettered objects and may be used as a dictionary retrieval aid to a player of an independent game not necessarily associated in any way with a learning process or methodology. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Frank L. Cire on February 27th to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
